

GBT energy saving oven for customer in Asia

2019-11-20 09:31

The new GBT oven Mistral convinces with even heat from the first baking. The baking behaviour is similar to a thermal oil oven. With a 50% lower power input than a conventional cyclothermic oven, with the use of conventional household burners for gas or oil use and the cleverer modular design allows flue gas utilization, which can end up saving up to 30% energy. Very short installation time, no welding in bakery.

And last but not least, the Mistral only needs one chimney.

The new Mistral from GBT. Protects the environment and saves costs.
